

AMENDMENTS TO THE CLAIMS

1.-6. (Cancelled)

7. (Original) A digital camera which records an image of each frame captured by an imaging device and information of number of prints to be produced from each frame in a recording medium, said information being referred to when said image is printed, said digital camera comprising:

an all-frame print number setting device that collectively sets the numbers of prints for the images of all the frames recorded in said recording medium.

8. (Original) The digital camera as defined in claim 7, wherein said all-frame print number setting device sets the numbers of prints to one.

9. (Original) The digital camera as defined in claim 7, further comprising:

an each-frame print number setting device that sets the number of prints for each frame image recorded in said recording medium,

wherein said all-frame print number setting device sets the numbers of prints for the images of all the frames to one regardless of the numbers of prints set by said each-frame print number setting device.

10. (Original) The digital camera as defined in claim 7, further comprising:

an each-frame print number setting device that sets the number of prints for each frame image recorded in said recording medium,

wherein said all-frame print number setting device sets the numbers of prints to one only for frames whose numbers of prints have been zero.

11. (Original) The digital camera as defined in claim 7, further comprising:

an each-frame print number setting device that sets the number of prints for each frame image recorded in said recording medium,

wherein said all-frame print number setting device increases the number of prints for each frame set by said each-frame print number setting device by one.

12. (New) The digital camera as defined in claim 7, wherein said all-frame print number setting device searches for an image file of a frame having been undesignated for printing among all the frames recorded in said recording medium, and sets the number of prints for the image of the frame having been undesignated for printing.

13. (New) The digital camera as defined in claim 7, further comprising a printing information recording device that records the information of the numbers of prints set by said all-frame print number setting device in said recording medium.

14. (New) A digital camera which records an image of each frame captured by an imaging device and information of number of prints to be produced from each frame in a recording medium, said information being referred to when said image is printed, said digital camera comprising:

a display device that displays a multiple-frame picture collectively showing images of multiple frames recorded in said recording medium;

a frame selecting device through which the frames to be designated for printing are selected on the multiple-frame picture displayed on said display device; and

a selected-frame print number setting device that collectively sets the numbers of prints for the images of the frames having been selected through said frame selecting device.
